

After Your Procedure: Ultrasound-Guided Breast Cyst Aspiration

- You may return to work and your usual activities after the procedure is completed.
- Leave the bandage in place overnight. You may remove the bandage and shower the morning after your test. After showering, gently dry the biopsy area. Place a small amount of antibiotic ointment over the area and cover with a clean bandage.
- If you have any discomfort, you may take Tylenol[®] (acetaminophen). Do not use aspirin or any other over-the-counter medicine that has aspirin in it.
- If the fluid was sent to the laboratory for analysis, results will be ready in 2-3 days. You will receive the results from the Breast Health Center nurse, the radiologist or your doctor.

Call the nurse at **(415) 600-6281** or **(415) 600-1914** if you develop any of the following symptoms:

- Fever of 101°F / 38.3°C or above
- Discomfort not relieved by Tylenol[®]
- Any unexpected bleeding or drainage from the biopsy site

Note: After business hours and on weekends, go to the Emergency Room
